

How to

Can I use Contentop app for writing my PhD thesis?

Thank you for your enquiry. I'm afraid that Contentop may not be able to solve your purpose completely but can help you in a partial way.

Contentop is primarily designed to generate articles & blog posts hence it won't be able to generate content that serve your purpose of auto-generation. However, you can use Contentop iScribe to add more flesh to your content.

Using Contentop iScribe, you can identify relevant keywords, reading material, related topics & trending tweets about any topic online. iScribe takes away the pain of going between different search engines to get your material. Below is a link to the video demo of how iScribe can help you:

In addition to these features, you can also use iScribe as repository, as an SEO checker, to check the readability of the content, or to check whether your thesis has plagiarized content(only available in paid version).
